

# KNOW YOUR RAT POISONS

Rodenticides are killing our native fauna

I'm a  
Quenda  
not a rat

## ALWAYS...

...use **FGARs** (First-generation Anticoagulant Rodenticides) - they have a **short half life (9-30 hrs)**.

Lower concentrations in dead rats can be metabolised by native fauna and require multiple feeds to be fatal.

**Use FGARs that contain: Warfarin, Coumatetralyl (Racumin), Non-anticoagulant alternative - sodium chloride**

## NEVER...

...use **SGARs** (Second-generation Anticoagulant Rodenticides).

They kill native fauna because they:

- **can kill in one feed**
- **have a long half life (91 days)**

Higher concentrations in dead rats kill fauna by making them drowsy and therefore vulnerable to predators and cars.

# KNOW YOUR QUENDA (FROM YOUR DOMESTIC RAT)
